Bone Densitometry Report: Monday, January

2019 (requested on 43/19)

Referring Physician: NORA TEE MD

PATIENT:

Name:

GAN, HONG

Patient ID:

000565300 Female Birth Date: Measured: 12/06/1968 01/11/2019

Height: Weight: 62.0 in. 138.0 lbs.

Indications:

Fractures:

Treatments:

Sex:

ASSESSMENT:

The BMD measured at Femur Neck Right is 0.871 g/cm² with a T-score of -1.2 is considered moderately low. Fracture risk is moderate. Treatment is advised if there are other risk factors.

With a Z-score of -0.4, this patient's BMD is within normal limits for their age and sex, even though bone loss may have occurred.

World Health Organization (WHO) criteria for post-menopausal, Caucasian Women:

Normal T-score at or above -1 SD Low Bone Mass T-score between -1 and -2.5 SD Osteoporosis T-score at or below -2.5 SD

T

RECOMMENDATION:

Mild to aggressive therapies are available in the form of Hormone replacement therapy (HRT), bisphosphonates, Calcitonin, and SERMs. Additionally, all patients should ensure an adequate intake of dietary calcium (1200 mg/d) and vitamin D (400-800 IU daily).

FOLLOW-UP:

People with diagnosed cases of osteoporosis or osteopenia should be regularly tested for bone mineral density. For patients eligible for Medicare, routine testing is allowed once every 2 years. The testing frequency can be increased to one year for patients who have rapidly progressing disease, or for those who are receiving medical therapy to restore bone mass.

Based on these results, a follow-up exam is recommended in January 2021
