Dear GAN, HONG,

There is no evidence of breast cancer on your recent imaging study. Your mammogram shows that your breast tissue is dense. Dense breast tissue is common and is not abnormal. However, dense breast tissue can make it harder to evaluate the results of your mammogram and may also be associated with an increased risk of breast cancer.

The information about the results of your mammogram is given to you raise your awareness and to inform your conversations with your doctor. Together, you can decide which screening options are right for you. A report of your results was sent to your physician. Please contact your physician if you have further questions.

Early detection of breast cancer requires a combination of monthly breast self-examination, yearly clinical breast examination and periodic mammogram.

The American Cancer Society recommends mammograms every year for women age 40 and over.

Sincerely,

Diagnostic Medical Group
